

AGENTS.md - GitLab On-Call Runbooks

Overview

This is the `gitlab-com/runbooks` project — the source of truth for GitLab.com’s monitoring, alerting, dashboards, and on-call runbooks. Everything is managed as code using **Jsonnet** (not Terraform).

- **GitLab URL:** `https://gitlab.com/gitlab-com/runbooks`
- **Grafana:** `https://dashboards.gitlab.net`
- **Mirrored to:** `https://ops.gitlab.net/gitlab-com/runbooks` (deployments happen from ops)

See also:

- `ARCHITECTURE.md` — system design, data flows, lifecycles
- `CONVENTIONS.md` — coding standards, formatting, naming, testing

Grafana Dashboards

This project also manages Grafana dashboards deployed to `https://dashboards.gitlab.net`. Dashboard source files live in `dashboards/` — see `dashboards/AGENTS.md` for the development guide.

Common Commands

```
# Install dependencies
./scripts/prepare-dev-env.sh      # First-time setup
make jsonnet-bundle              # Download jsonnet vendor deps

# Generate all outputs
make generate                     # Generate rules, dashboards, etc.

# Validate
make verify                      # Shellcheck + format check
make test                       # Full test suite (dashboards, rules, jsonnet tests)
make validate-mimir-rules      # Validate Mimir rules per tenant
make test-alertmanager          # Validate alertmanager config

# Test specific files
scripts/jsonnet_test.sh <file>_test.jsonnet      # Jsonnet unit test
bundle exec rspec spec/<path>_spec.rb            # RSpec integration test

# Format
make fmt                          # Format all (jsonnet + shell)
make jsonnet-fmt                 # Format jsonnet only
```

CI/CD Structure

CI runs on **both** gitlab.com and ops.gitlab.net (mirrored). Key jobs:

Job	Stage	Where	What
ensure-generated-content-up-to-date	test	gitlab.com	Verifies <code>make generate</code> produces no diff
test-jsonnet	test	gitlab.com	Runs jsonnet unit tests
test-dashboards	test	gitlab.com	Dry-run dashboard upload
deploy-dashboards	deploy	gitlab.com (main only)	Uploads dashboards to Grafana
validate-mimir-rules	validate	ops.gitlab.net	<code>mimirtool rules check</code>
deploy-mimir-rules	deploy	ops.gitlab.net (main only)	<code>mimirtool rules sync</code>
deploy-alertmanager	deploy	ops.gitlab.net (main only)	Deploys alertmanager config
