

customers.gitlab.com

Overview: <https://gitlab.com/gitlab-org/customers-gitlab-com/-/blob/staging/README.md>

customers.gitlab.com is currently hosted in Azure with a plan to move it to auto-devops in GCP <https://gitlab.com/gitlab-org/customers-gitlab-com/-/issues/671>

API key rotation

GitLab.com and Staging.GitLab.com are configured with two environment variables:

- SUBSCRIPTION_PORTAL_ADMIN_TOKEN
- CUSTOMER_PORTAL_URL

Although it this token is called an ADMIN it has limited access.

The admin token can be rotated on the customers.gitlab.com rails console:

```
ssh customers.gitlab.com
```

```
$ gitlab-rails-console
```

```
irb> a = Admin.find_by_email('gl_com_api@gitlab.com')
irb> a.update(authentication_token: Devise.friendly_token.first(16))
irb> a.save
irb> a
```

The token is passed into the rails environment through gkms secrets, to update it:

```
./bin/gkms-vault-edit gitlab-omnibus-secrets {gprd,gstg}
```
