

Git Stuck Processes

Reason

Workhorse is not killing connections on a deadline after the client went away, this means that these processes are dangling blocked on IO, effectively doing nothing.

Prechecks

Count how many processes are dangling, more than 10 is way too much for our current load (this may change over time)

```
knife ssh roles:gitlab-base-fe-git 'ps -eo cmd,pid,etimes= | grep  
receive-pack | wc -l'
```

Resolution

Kill all the processes that are dangling for more than one hour

```
knife ssh roles:gitlab-base-fe-git 'ps -eo etimes=,pid,cmd,pid  
| grep receive-pack | awk "{ if (\$1 > 1800) { print \$2 }}" |  
xargs sudo kill '
```

Postchecks

Consider running the prechecks again
