- **Label:** gitlab-com/gl-infra/production~“Service::NGINX”

Logging

- Kubernetes
- Error Logs

Summary

NGINX sits in front of our Puma services. It provides a bit of protection between end users and puma workers to prevent saturation of threads.

Architecture

For Virtual Machines, this is deployed via our Omnibus package and runs as a service that receives traffic.

For Kubernetes, this is deployed using the NGINX Ingress controller managed by our helm chart. <https://docs.gitlab.com/charts/charts/nginx/>

Configuration

<https://docs.gitlab.com/omnibus/settings/nginx.html>
