

Aptly

Our Aptly server is `aptly.gitlab.com` and is primarily used to host custom packages that we built (e.g. `gitlab-cadvisor`).

When prompted for the passphrase for the GPG key, you can find it in 1Password in the DevOps vault under item “Aptly GitLab Repo GPG Passphrase”.

Add or update a file in the gitlab-utils repository

Our Aptly installation also includes a `gitlab-utils` repository for storing locally created packages.

Adding or updating a file in the gitlab-utils repository

After uploading your package to the Aptly server, add or replace the existing package.

```
user@aptly:~$ sudo su - aptly
# If the package already exists in the repo, find the name and then remove it from the repo
aptly@aptly:~$ aptly repo show --with-packages gitlab-utils
Name: gitlab-utils
Comment: GitLab Server Utilities
Default Distribution:
Default Component: main
Number of packages: 1
Packages:
    package_name_2.8.3-1_amd64

aptly@aptly:~$ aptly repo remove gitlab-utils package_name_2.8.3-1_amd64
Loading packages...
[-] package_name_2.8.3-1_amd64 removed

# Now add the new or updated package
aptly@aptly:~$ aptly repo add gitlab-utils package_name_2.8.3-1_amd64.deb
Loading packages...
[+] package_name_2.8.3-1_amd64 added
```

Now create a new snapshot for this version of the repository

Snapshots preserve the state of the repository. Include the date so that multiple snapshots can co-exist.

```
user@aptly:~$ sudo su - aptly
aptly@aptly:~$ aptly snapshot create gitlab-utils-stable-$(date +"%Y%m%d") from repo gitlab-
```

Snapshot `gitlab-utils-stable-20161221` successfully created.

You can run `'aptly publish snapshot gitlab-utils-stable-20161221'` to publish snapshot as Deb

Switch the published snapshots

Now we must replace the currently published snapshot with the newly created snapshot

```
user@aptly:~$ sudo su - aptly
aptly@aptly:~$ aptly publish switch xenial gitlab-utils gitlab-utils-stable-$(date +%Y%m%d)

```

Update a mirror

Currently we don't auto update any mirror since we need to manual sign the mirror when publishing.

Update mirror

```
user@aptly:~$ sudo su - aptly
aptly@aptly:~$ aptly mirror list
List of mirrors:
* [ceph-jewel]: https://download.ceph.com/debian-jewel/ xenial

aptly@aptly:~$ aptly mirror update ceph-jewel
Downloading https://download.ceph.com/debian-jewel/dists/xenial/InRelease...
gpgv: Signature made Mon 17 Oct 2016 12:42:02 PM UTC using RSA key ID 460F3994
gpgv: Good signature from "Ceph.com (release key) <security@ceph.com>"

Downloading https://download.ceph.com/debian-jewel/dists/xenial/main/binary-amd64/Packages.b
Building download queue...
```

Download queue: 0 items (0 B)

Mirror `ceph-jewel` has been successfully updated.

Create new snapshot

Just use current date in name so we know from when the repository was updated.

```
user@aptly:~$ sudo su - aptly
```

```
aptly@aptly:~$ aptly snapshot create ceph-jewel-$(date +"%Y%m%d") from mirror ceph-jewel
```

Snapshot ceph-jewel-2016-11-07 successfully created.

Switch published to new snapshot

```
user@aptly:~$ sudo su - aptly
```

```
aptly@aptly:~$ aptly publish switch xenial ceph-jewel-$(date +"%Y%m%d")
```
