

Cloud SQL Data Export

Summary

To export data from a cloudSQL database (such as `version.gitlab.com`), to give to the data team for analytics, use this procedure

Prepare

Create a temporary bucket in the `gitlab-internal` GCP project. In this case, I'm creating `tmurphy-temp`

Verify that you have access to both the new bucket and the cloudSQL instance in the `gs-production` and `license-prd` projects. (All SRE's should have this access).

Procedure

Ensure the projects are set up

This only needs to be done once, and you can skip it and re-use your own project configurations below if you know that you already have them set up with a different name.

```
gcloud config configurations create gs-production --project gs-production-efd5e8 --account $USER
gcloud config configurations create license-prd --project license-prd-bfe85b --account $USER
```

Note that you'll need to replace `$USER` in the commands if your Google ID and local user name are different.

Export version

```
gcloud config configurations activate gs-production
gcloud sql export sql cloudsql-411f gs://gs-production-db-backups/version-data-(date +%Y-%m-%d)
```

The above operation WILL time out. This is fine. The error message will be something similar to the following:

Operation <https://sqladmin.googleapis.com/sql/v1beta4/projects/gs-production-efd5e8/operations/ops-2024-07-24-14-00-00>

Run the command suggested in that message to check when it finishes. (It might be necessary to run it to check more than once).

Copy version

Once it completes, copy it to the temporary bucket.

```
gsutil cp gs://gs-production-db-backups/version-data-(date +"%Y-%m-%d").gz gs://tmurphy-temp
```

Export license

```
gcloud config configurations activate license-prd  
gcloud sql export sql cloudsql-4bf6 gs://license-prd-data/license-data-(date +"%Y-%m-%d").gz
```

Copy license

Once it completes, copy it to the temporary bucket.

```
gsutil cp gs://license-prd-data/license-data-(date +"%Y-%m-%d").gz gs://tmurphy-temp/license
```

Wrap up

Notify the requester of the bucket name above and remind them that they are responsible for deleting the bucket.
