

Getting help with GCP support and Rackspace

Engineer(s) oncall - you now go to Google first in the GCP console for support tickets

1. File support cases for GCP issues with the Google Support case system. See the readme in the vendor tracker for more details and additional escalation paths.
2. We use Rackspace for billing of GCP. Questions for billing can be opened in the Rackspace portal.

Support Portal and numbers

Google:

- There is also a dedicated slack channel to inquire about any issues which GCP may be seeing and for seeking assistance: `#ext-google-cloud`

Rackspace:

- Link to Portal <https://mycloud.rackspace.com>
- SRE managers and Infra Analysts have access to the rackspace portal

GitLab issues Trackers

Google Vendor Tracker: <https://gitlab.com/gitlab-com/gl-infra/google-gitlab-tracker>

Rackspace Vendor Tracker: <https://gitlab.com/gitlab-com/gl-infra/rackspace/issues>

Contacts

Google:

- See the readme in the vendor tracker. The project is private due to confidential interactions with the vendor.

Making a support ticket in Rackspace (For billing questions only)

Pick the Rackspace Ticketing System, Project ID: `mgcp-1173105-ticket-escalation`. This will allow you to pick a severity.

Short history, due to automation needs from Rackspace, service accounts would need to be made in `gitlab-production` and we were not okay with that from a security point of view. This temporary project is a workaround to let us pick severity on tickets and will be watched by our support there.

GitLab-production project is our GitLab.com SaaS application project and cases there will have the highest Priority.

Rackspace SLA for tickets is 4 hours for ticket response.
