

Inhibit Rules

This is a collection of common dependencies through our application, for example a lot of services will depends on a `patroni` cluster.

Usage

```
local dependOnPatroni = import 'inhibit-rules/depend_on_patroni.libsonnet';

metricsCatalog.serviceDefinition({
  type: 'web',

  serviceLevelIndicators: {
    workhorse: {
      dependsOn: dependOnPatroni.sql_components,
    },
  },
})
```
