

CMOC Checklist

Shift Start

Declaring an Incident

checklist for starting and incident:

- ☐ For the CMOC - post in #incident-management that you are the CMOC - cross post to #support_gitlab-com if needed
- ☐ Create the production issue if possible. In slack: /start-incident or if you have an alert in alerts-general - click the Open Issue button in the thread.
- ☐ Create an incident in <http://status.io> - make sure you check the options to broadcast to slack, twitter, etc
 - If you don't have full specifics, get the incident created in status.io and first tweet out with a more generic "We are seeing elevated error rates on GitLab.com". It is better to have a post sooner with investigating than waiting 5 minutes to know more.
- ☐ Create a google doc from the shared template
- ☐ Update Slack and the status.io incident with links to the issue number and google docs.
- ☐ Check with incident team. Are they all in the same channel, gdoc, on the zoom as needed. Coordinate and consolidate communication
- ☐ Set a timer for 15 minutes to remind yourself to update status.io and tweet
- ☐ Start to gather overall summary and look to write up an executive summary in the production issue or gdoc for others in the company
- ☐ Check in with incident team:
 - Do they need more people or expertise? Broadcast and ask for help as soon as you know it is needed.
 - Clear the deck - make sure other changes / teams know an incident is going on
 - Clear the deck - cancel other meetings as needed.

Taking Ownership of an Incident
